

# Daisy Wholesale Virtual Private Network

## Dependable secure connectivity

### Virtual Private Networks

Daisy Wholesale VPN provides you the opportunity to deliver a comprehensive, scalable and secure solution to your partners to connect distributed sites both nationally and internationally. We provide native VPN solutions aggregated within the Daisy Wholesale network therefore there is no requirement for specialist VPN hardware at each site, making the solution inherently secure and more cost effective than other provider services.

The objective of the Daisy Wholesale VPN offering is simple: to build a network that, as much as possible, acts like an extension of a private internal network. The result is a fast and efficient means of making distributed locations seem just like local sites, from home workers to branch offices to head quarters.
