

Daisy Wholesale Leased Lines

Guaranteed un-contended bandwidth

Introduction

Leased lines provide business class connectivity from the Daisy Wholesale network to customer sites at speeds between 2Mbit/s and 10Gbit/s. A leased line is the ideal solution for organisations looking for unrivalled service levels in comparison to that of ADSL and SDSL whilst offering fully un-contended, symmetrical throughput at a variety of speeds.

If your customers business relies on connectivity then it's imperative that you deliver a solution that reflects this requirement. Leased lines provide a high availability, highly scalable solution with increased service level performance than that available with other connectivity solutions.

Daisy Wholesale can provide SDH and Ethernet leased line connectivity across a number of carrier networks both in the UK and internationally ensuring the proposed solution is competitive and fit for purpose.

Daisy Wholesale is able to provide both Internet leased lines as well as point to point circuits (i.e. a connection from one location to another without Internet access).

Internet Leased Lines

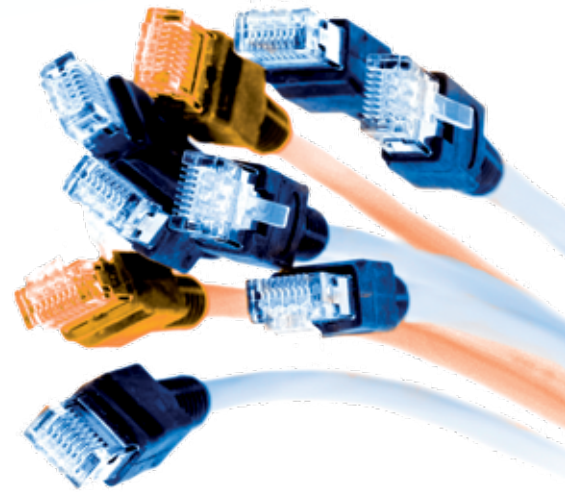

Internet leased line services provide a direct connection into the Daisy Wholesale transit network. The cost of an Internet leased line is calculated based upon the distance from the delivery location to the local Daisy Wholesale or carrier point of presence.

Internet Leased Lines are provided with a managed Cisco router and are monitored 24x7x365 by the Daisy Wholesale Network Operations Centre. Internet leased lines can also be provided with DSL fail-over as well as a managed firewall as required.

Point to Point

Point to point network services provide direct access between sites. Daisy Wholesale are able to provide point to point connectivity both within the UK and between the UK and international locations.

Whatever your location or speed requirements Daisy Wholesale have relationships with incumbent local carriers throughout the world to deliver reliable fixed line solutions.

The Benefits

- ✓ Guaranteed un-contended bandwidth.
- ✓ High capacity from 2Mbit/s to 10Gbit/s.
- ✓ Service Level Agreements providing guaranteed uptime and fault repair within 4 hours.
- ✓ Provided with Managed Cisco hardware as standard with 4 hour on site repair by our Cisco Certified engineers 24x7x365.
- ✓ Resilience, backup and auto fail-over options both for the leased line and managed hardware.
- ✓ Managed Firewall options.
